Technical Skills

Languages: Python, SQL, C#, TypeScript, HTML, CSS

Data and Machine Learning: Pandas, NumPy, Matplotlib, Seaborn, scikit-learn, XGBoost, forecasting, data analysis

Frameworks and Platforms: Streamlit, SQLAlchemy, PostgreSQL, Django, Next.js, React, Docker

Tools and Concepts: Git, GitHub, Jupyter Notebook, VS Code, Visual Studio, OOP, data structures and algorithms, file handling, exception handling, modules and packages, APIs and JSON, web scraping, automation, debugging

Projects

SmartStock - Demand Forecasting and Inventory Optimization

Independent Project, 2026

Python, Pandas, scikit-learn, XGBoost, SQLAlchemy, PostgreSQL, Streamlit, Docker

- Built an end-to-end system on 582,300 M5-derived observations covering 100 FOOD items across three stores and 300 item-store series.
- Developed leakage-safe chronological and recursive 30-day evaluation across five baselines, Ridge, HistGradientBoosting, and XGBoost; selected the 28-Day Historical Mean on balanced validation and achieved locked-test MAE of 1.382 and 30-day aggregate WAPE of 22.14%.
- Converted forecasts into safety stock, reorder points, stockout risk, and cost-aware recommendations for 300 item-store decisions; delivered a seven-section Streamlit dashboard with a PostgreSQL/SQLAlchemy layer, CSV fallback, Docker configuration, and 86 passing tests.

Python Data Analysis and Machine Learning Practice

Self-Learning Project

Python, Pandas, NumPy, Matplotlib, Seaborn, scikit-learn

- Cleaned, transformed, and analyzed structured datasets with Pandas and NumPy; created visualizations to identify distributions, comparisons, patterns, and relationships.
- Built and evaluated introductory machine-learning workflows with scikit-learn; organized readable scripts and notebooks using functions, modules, exception handling, and iterative debugging.

Experience

Freelance Web Developer

Remote, 2026

Windows XP-Themed Client Portfolio Website

- Designed and developed an interactive Windows XP desktop-inspired portfolio using Next.js, React, TypeScript, HTML, and CSS.
- Built reusable desktop windows, a Start menu, taskbar, project folders, resume and contact sections, plus controls for opening, minimizing, maximizing, closing, and managing active-window display order.
- Used Git and GitHub for version control and refined the interface through iterative testing and client feedback.

Education

Bachelor of Engineering in Computer Science and Engineering

Expected July 2027

S.E.A. College of Engineering and Technology

2023-2027

Certification

Python for Data Science - Course completed

Covered Python programming, data manipulation, data visualization, and introductory machine-learning concepts.

Relevant Coursework

Data Structures, Data Science, Web Development, Computer Networks, Object-Oriented Programming, Artificial Intelligence

Additional Information

Strengths: Problem-solving, communication, teamwork, leadership, self-learning

Languages: English, Hindi, Kannada **Interests:** Reading books, cloud gazing
