Linkedin.com/in/Kabir-Bisanal | Github.com/Kabir-Bisanal

CS undergraduate specializing in data/ML and full-stack development, with production-style projects spanning demand forecasting and role-based publishing platforms.

Technical Skills

- **Languages:** Python, SQL, C#, TypeScript, HTML, CSS
- **Data and Machine Learning:** Pandas, NumPy, Matplotlib, Seaborn, scikit-learn, XGBoost, forecasting, data analysis
- **Frameworks and Platforms:** Next.js, React, ASP.NET MVC, Streamlit, SQLAlchemy, PostgreSQL, Django, Supabase, Docker
- **Tools and Concepts:** Git, GitHub, Jupyter Notebook, VS Code, Visual Studio, OOP, data structures and algorithms, file handling, exception handling, modules and packages, APIs and JSON, web scraping, automation, debugging

Projects

SmartStock – Demand Forecasting and Inventory Optimization *Independent Project, 2026*

Python, Pandas, scikit-learn, XGBoost, SQLAlchemy, PostgreSQL, Streamlit, Docker

- Achieved a locked-test MAE of 1.382 and 30-day aggregate WAPE of 22.14% by selecting the 28-Day Historical Mean model after leakage-safe chronological and recursive evaluation across five baselines, including Ridge, HistGradient-Boosting, and XGBoost.
- Built an end-to-end system on 582,300 M5-derived observations covering 100 FOOD items across three stores and 300 item-store series.
- Converted forecasts into safety stock, reorder points, and cost-aware recommendations for 300 item-store decisions, delivered via a seven-section Streamlit dashboard (PostgreSQL/SQLAlchemy, CSV fallback, Docker) with 86 passing tests.

Topicora – Editorial Publishing Platform and Role-Aware CMS *Independent Project, 2026*

Next.js, React, TypeScript, Tailwind CSS, Supabase (PostgreSQL, Auth, Storage, RLS), Zod, Resend

- Built a production-oriented MVP for an India-first digital publication, combining a fast public reading experience (responsive homepage, archive, categories, tags, dark mode, table of contents) with a custom, role-aware editorial CMS.
- Implemented PostgreSQL weighted full-text search and end-to-end article workflows (create, edit, preview, publish, schedule, archive, restore) with server-side authorization, Supabase Auth, and Zod-validated mutation contracts.
- Designed a Row-Level Security model across eight database tables; secured the platform with a five-megabyte image upload MIME allowlist and expiring HMAC-signed draft preview tokens.
- Delivered newsletter double opt-in, distributed rate limiting, and full SEO/distribution surfaces (JSON-LD, sitemap, robots, RSS) with WCAG 2.2 AA-oriented accessibility, validated with Vitest, Playwright, and GitHub Actions CI.

Windows XP-Themed Interactive Portfolio *Independent Project, 2026*

kabirbisanal.com / Next.js, React, TypeScript, HTML, CSS

- Designed and built an interactive Windows XP-inspired portfolio, replacing a conventional scrolling layout with a desktop-style UI featuring draggable icons, a taskbar, a Start menu, and project windows.
- Implemented a custom window-management system with typed window states (React, TypeScript) supporting open, close, minimize, maximize, and active-window ordering, plus a session-aware startup sequence and responsive mobile behavior.

Experience

Software Development Intern *June 2026 – July 2026*

Rimbuss

- Received hands-on training in C# and OOP concepts (classes, objects, exception handling, file handling) and the ASP.NET MVC framework, including Models, Views, Controllers, routing, and API-based CRUD operations.
- Built CRUD-based practice applications using ASP.NET MVC and SQL, writing queries and connecting web applications to relational databases.
- Used Git and GitHub for version control practice, including repositories, branching, commits, merging, and push/pull workflows.
- Gained exposure to CRM concepts, client requirement gathering, and customized software workflows; observed a client requirement discussion led by the company CEO.

Education

Bachelor of Engineering in Computer Science and Engineering *Expected July 2027*

S.E.A. College of Engineering and Technology

2023 – 2027

Certification

Python for Data Science – Course completed

Covered Python programming, data manipulation, data visualization, and introductory machine-learning concepts.

Relevant Coursework

Data Structures, Data Science, Web Development, Computer Networks, Object-Oriented Programming, Artificial Intelligence

Additional Information

Strengths: Problem-solving, communication, teamwork, leadership, self-learning **Languages:** English, Hindi, Kannada **Interests:** Reading, cloud gazing
